**Global agriculture is broad and large(3<sup>rd</sup> largest after currency and energy markets) and experiencing steady growth(4 - 5%)**

Total global agriculture market value is estimated at more than **\$6.4 trillion** (including the food & beverage sector), representing over **8.5% of the world's economic activity in 2010.**

Proprietary information – not for distribution. Copyright © 2014 by HighQuest Partners LLC. All rights reserved.

## Global agricultural trade volume projected to increase 2.7% (CAGR) through 2020

Agricultural commodities trade is forecast to exceed 520 million metric tons in next ten years due to rising demand in China, India, Southeast Asia and Middle East.

## Agriculture value chain – “conceptually simple and yet challenging for efficient execution”

A complex market structure which requires appreciation for how margins are shared amongst players at different points along the supply chain.

## Range of investment opportunities in the ag sector

### Real Assets

- Farmland
- Infrastructure

### Private Equity

- Upstream
  - inputs(seed, chemicals, fertilizer, technology services, capital goods)
- Downstream
  - storage and logistics
  - value added processing of ingredients
  - food/feed/industrial processing

### Venture Capital

- Biotech
- Enabling technologies (precision ag)

### Water theme investments

### Liquid Assets

- Public equities
- Commodity index funds

Proprietary information – not for distribution. Copyright © 2014 by HighQuest Partners LLC. All rights reserved.

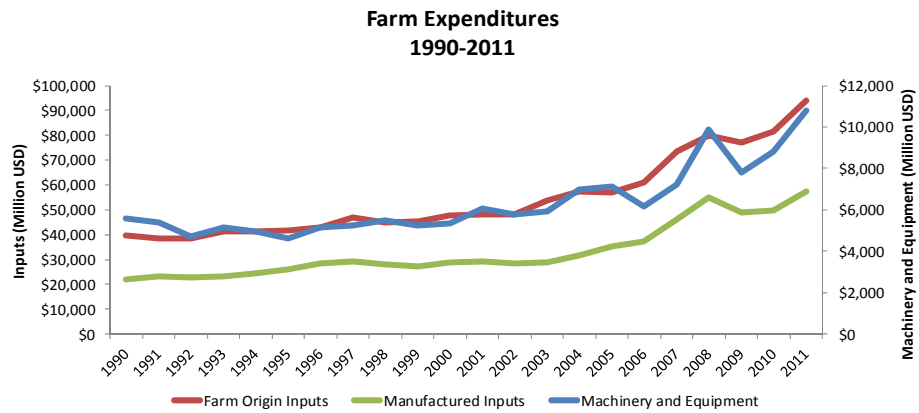

## Examples of broad range of activities in the global agricultural sector

	2010 market value (est.)	2015 market value (est.)	Estimated CAGR 2010-2015
Seed	\$37 billion	\$47 billion	3.5%
Ag chemicals & fertilizer	\$134 billion	\$196 billion	6.5%
Ag machinery	\$56.1 billion	\$80.5 billion	7.5%
Ag production	\$ 1.3 trillion	\$1.46 trillion	2.4%
Food& beverage	\$3.84 trillion	\$4.6 trillion	3.7%
Animal feed	\$263 billion	\$313 billion	3.5%
Meat & aquaculture	\$672 billion	\$815 billion	3.9%
Biofuels	\$56.4 billion	\$80 billion	7.2%
Ag investment	\$20 billion	\$40 billion	15%
Ag insurance	\$23 billion	\$66.6 billion	20%

## Key issues driving farmland values

- **Population growth and increase in GDP**
  - World population 9 billion in 2050
  - Increased demand in developing markets, particularly Asia, SE Asia and North Africa
  - Shift in diets from grain to animal protein (**Bennett's law**)
- **Increasing urbanization**
  - Pressure on available arable land for crop production
  - Increasing reliance on processed foods
- **Constraints on supply**
  - Access to water
  - Climate change
  - Linkage to energy markets(biofuel mandates)
  - Slowdown in yield increases
- **Human capital**
  - Generational transfer in both developed and developing markets
  - Lack of capacity building in developing markets

## Demand for commodities driven by rapid GDP/capita growth in developing and emerging markets

Proprietary information – not for distribution. Copyright © 2013 by HighQuest Partners LLC. All rights reserved.

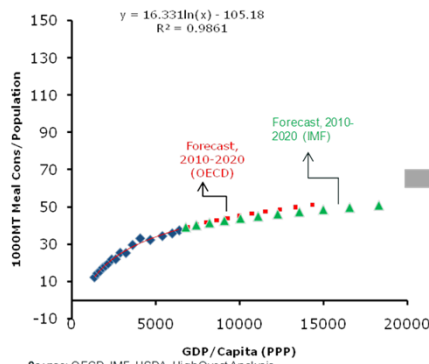

## Animal protein consumption highly correlated with per capita GDP

Animal Protein Consumption(kg) Per Capita vs. GDP Per Capita(PPP basis) - 2010

## China – meal demand forecast to increase 60%

Meal Consumption/Capita vs. GDP-PPP/Capita (1994-2009 actual/ 2010-2020 forecast)

Meal Consumption (1000MT,1980-2020F)

Over the past 15 years, meal consumption in China has had a 99% correlation with GDP per capita. Based on this correlation and OECD projections for future GDP growth in China, HighQuest projects that Chinese meal consumption will increase by 60% over the next decade (50 to 80 million MT).

## Impact of exports to China and ethanol production on US farmland use

**U.S. Acres Required for Corn and Soybean Exports to China and Ethanol Production 2000-2012**

\*Assumes a conversion rate of 2.65 gallons of ethanol per bushel corn and 31% of corn recovered through the production of DDGs (DDGs-adjusted). To mitigate the impact of yield anomalies on acreage requirement, estimates are based on 3-year trailing average yields.

## 5 key risk factors

### 1. Seed Technology

- Step-change improvement in yields
- Launch of drought resistance varieties

### 2. Slower Growth

- China
- SE Asia
- North Africa/Middle East

### 3. Algae or Microorganisms

- On the horizon
- biofuels; protein meal; fat

### 4. Infrastructure/Food Wastage

- Double-edged sword
- Inverts the supply curve

### 5. Government and Trade Policy

- Food security
- Export bans / trade embargoes
- GMO acceptance
- Renewable Fuels

## Historical returns – 100-year Illinois farmland appreciation

## Thesis for farmland investment

### 1. Fundamentals

- a) Supply < Demand
  - ➔ Increase in supply slower than increase in demand
- b) Demand Rationing
  - ➔ High & volatile prices
  - ➔ Price signal for capacity expansion
  - ➔ New demand creation – biofuels and industrial uses
- c) Higher Land Values...
 

...and potentially attractive economics throughout the sector resulting from application of technology and efficient agronomic practices which will generate higher cash rents per unit of land which will be capitalized into the value of the land.

### 2. Inflation & currency protection

### 3. Uncorrelated returns

Proprietary information – not for distribution. Copyright © 2013 by HighQuest Partners LLC. All rights reserved.

## Returns on U.S. farmland compared to other assets

## Historical correlation vs. inflation and other asset classes

<sup>1</sup>NCREIF Farmland Index is a quarterly time series composite return measure of investment performance of a large pool of agricultural properties acquired in the private market for investment purposes only.

<sup>2</sup>R measures the correlation between the price movements of two asset classes.

## Expectations of returns for farmland investment by region

## Major issues by region

Region	Land Control	Scale	Fragmentation	Ownership Structure	Business Model
US & Canada	free title	medium	medium	fund, corporate or direct	cash leases or direct operating
Australia & New Zealand	free title	large	low	fund or corporate	integrated - crops/grazing
Western Europe	free title	small	high	direct	direct operating
South America	free title	large	low	fund or direct	direct operating
Eastern Europe	free title	medium	medium	fund or direct	direct operating
FSU	evolving to free title	large	low	fund	direct operating
Africa	long-term land concessions	large	low	corporate	direct operating

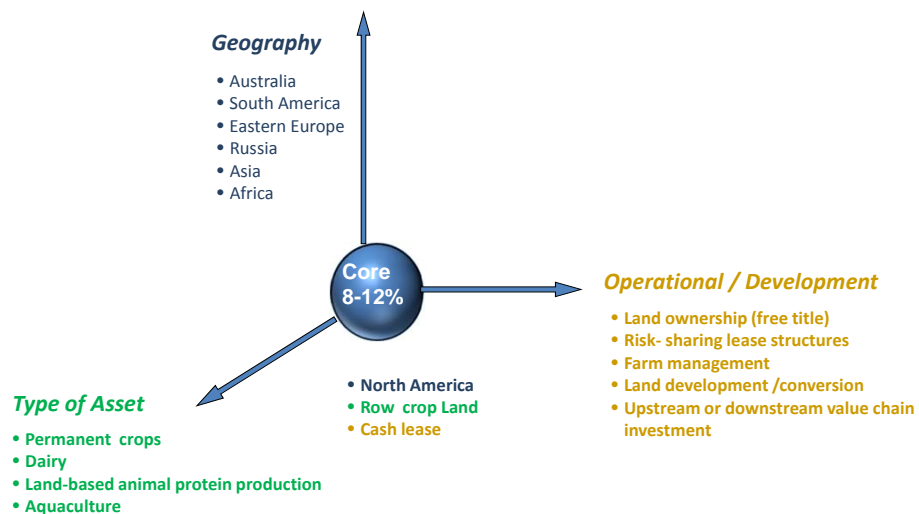

Proprietary information – not for distribution. Copyright © 2014 by HighQuest Partners LLC. All rights reserved.

## Returns and secular trends

1. **Historical 8% -12% real returns (US) likely scenario for the next decade**
  - Farmland prices in US currently experiencing stabilization
  - Higher in less mature markets(12 – 30% - private equity returns)
2. **Supply response which historically had lagged demand has been picking up**
3. **New pricing paradigm for crops → higher(compared to historical mean + more volatile) though prices have retrenched from recent highs**
  - Long run: price signal will be required to add capacity
4. **Farmland is ultimately the limiting factor → economic rents are capitalized into the value of farmland**
